Recently I ran into a problem that this program failed to resolve. The problem was that I had a separate drive that contained files which I no longer want.

Therefore, I used the inbuilt option in this program to move the files out of the infected directory. When I launched the software, I chose the option to "This doesn't show any files that are infected" but the software showed my files and wanted to move them. I clicked on "Yes" but then it said "Cannot remove 7 objects, probably because they are open in some window" and wouldn't allow me to go any further. So I tried removing just the infected files. They came back saying "Cannot remove 1 object, the file is infected" and I had to choose "Cancel". When I tried using the "Move" option, it did not work either. I am running a Windows Vista and the software version is 1.0.1.0019. I am afraid that this is a bug in the software and I am looking for a resolution. Hi, I had a problem. I had the Sobig.E Remover v2
