Adobe's font management has traditionally been clunky. Photoshop 11 sorts your fonts as a big alphabetical list, which makes finding the right one easy. It's helpful to have a graphic designer with you at all times, because the program isn't always on top of understanding the alphabetical order of the fonts installed on your computer. A new feature called the Typography panel, found in the Tools menu, simplifies the process. The advanced retouching tools are a bit easier than ever to access, thanks to Photoshop's new matrix view. The program now highlights selected regions of the image, and you can easily zoom and change contrast. It's much faster after the update, but using Lightroom is slower than before, especially in the develop module. After the patch there were some slowdowns, but I don't know what could be the cause of this. The file size has grown a bit in Lightroom, so memory is slightly higher too. Not sure why it has become slower.

Lucas I don't see how it's possible that the older PSDs are reduced in size. For example, the RAW Preview window in CS6 is 1.76 MB, while the size of the.psd file is 4.4 MB. I wouldn't expected the file size to change from 1.76 to 4.4. I also used to work a lot with Photoshop and sometimes even with Lightroom, especially when rotating. I have a lot of knowledge about how to work with the application, so I'm wondering if now it's no more possible in Lightroom to work with the images as I did before.

Well, it is just a matter of time that they force me to leave Photoshop altogether.
