The lines from the "Magic Wand" tool are now semi-transparent, which helps when you're working with relatively flat and uniform backgrounds. The amount is set by default to 50%, which is enough to make edges visible. The "Adjuster" dialog box has also been improved, with a slider for the Radius, which is a combination of the Width and the Bias. You can set the Width to anywhere between 0 and 100. The Bias adjusts the amount of curvature of the brush, which in many cases makes it more precise. You can turn on the dropdown and move the Radius slider. You can now set an exact radius for the brush or use the sliders to quickly get close to a perfect circle by adjusting the Width and the Bias until you get a curve you like. Curves can be tough because they don't always behave consistently, but once you get them to a point where they're nice and smooth, you can return to the numeric settings and start over. The Radius slider also allows you to move the "bite point" of the brush, effectively the point where pixels are added to the brush. While it's not always exactly the point you want, it's much easier to hit a radius and play around with it. You can go back and forth as needed, and the Radius slider actually acts as a step or a progress bar. This is pretty slick. The Adjuster dialog box also includes a Non-Destructive History control that keeps track of all changes you make, which is pretty cool. You can choose even or odd. I have about 30,000 PSD files and rarely use the "Export and Optimize for Web" button. My workflow for exporting is streamlined and works pretty well. Add a link to the canvas/layer/etc., then optimize for web as much as I need then export for web when it's complete. I think I see the same speed enhancements you mentioned for other Photoshop features (e.g., transformations, filters etc.) but maintain the workflow I've used for the last 8 years of upsizing and re-exporting. Using the smart previews also seems to increase the speed for optimizing jpegs for the web, especially once the images are enhanced.
